DECENTRALISED CLINICAL TRIALS IN WOUND CARE

Specialist home visits that protect the wound, the participant and the protocol.

Dual trained Advanced wound care and Research nurses + Medic

WOUND CARE LEAD	RESEARCH LEAD	MOBILE DOCTOR
Advanced wound assessment, atraumatic cleansing, dressing procedures and endpoint-quality wound handling.	GCP-focused protocol delivery, source documentation, IMP controls, safety reporting and sample-chain integrity.	Home-based medical oversight, protocol-defined examination and investigator-delegated clinical procedures.

WHAT WE CAN DELIVER IN THE PARTICIPANT'S HOME

- Wound cleansing and debridement
- Protocol-specified dressing changes
- Blinded topical IMP application or supervised application, subject to delegation and IMP controls
- Standardised wound photography and measurement
- Procedural-pain assessment, QOL assessments
- Local tolerability and adverse-event assessment
- Pulse, blood pressure, ecg, ABPI and protocol observations
- Blood sampling, including with centrifuge
- Sample preparation, packaging and courier handover
- Participant/carer training and compliance checks

DESIGNED FOR STUDIES WHERE EVERY VISIT MATTERS

UP TO 15 PARTICIPANTS at one time	TWO-NURSE VISITS	SITE EXTENSION
A deliberately low-volume model for complex, visit-intensive protocols in England.	One clinician protects wound-care quality; the other protects protocol integrity and documentation.	We work under investigator delegation and sponsor/CRO requirements, bringing defined visits into the home.

IDEAL FOR

Rare dermatology • epidermolysis bullosa • chronic wounds • topical IMP studies • wound devices and dressings

Repeated assessments • difficult travel • fragile patients • complex imaging • timed PK samples • intensive carer training

BRING THE PROTOCOL TO THE PATIENT

Discuss UK home-visit feasibility, visit schedules, delegation, geography and cohort requirements with our clinical team.
